

SEED ROUND · £4.2M · SEPTEMBER 2026

Europe has legislated the demand. Nobody has staffed the supply.

Heatline · capacity planning and job scheduling for residential heat-pump installers

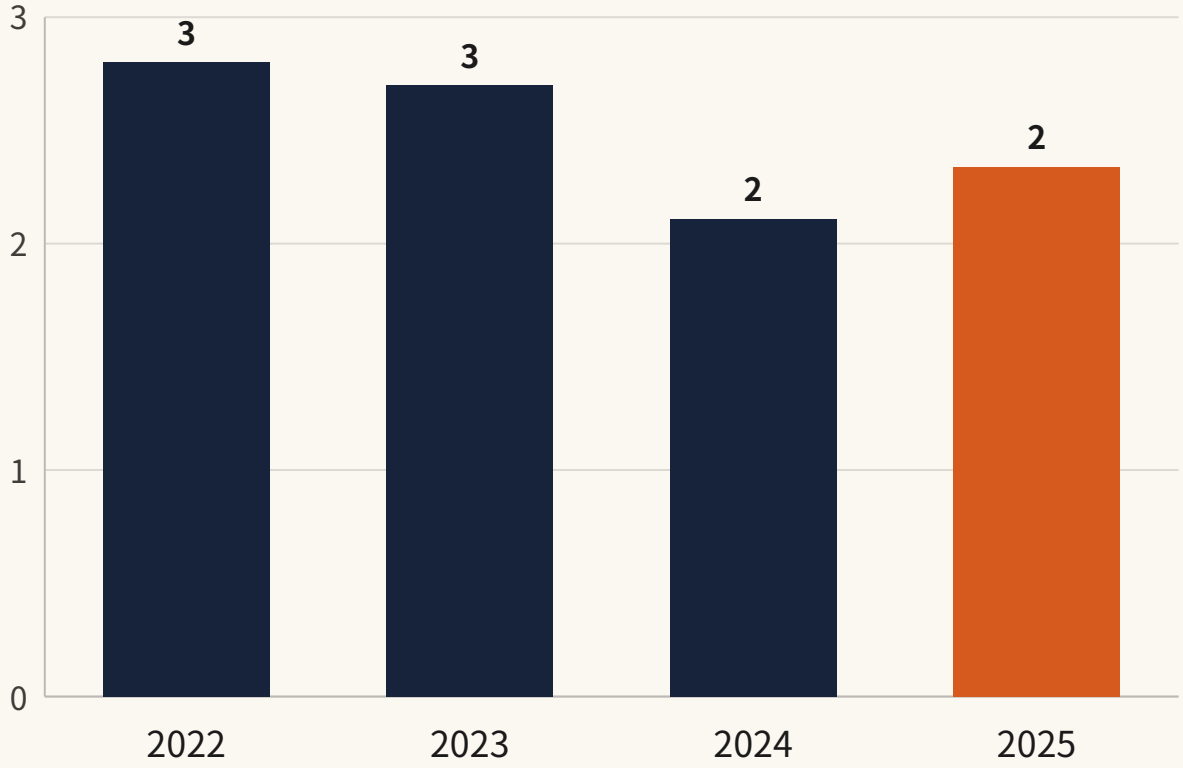

Heatline is a fictional company. All company, product, customer, traction and financial figures in this deck are illustrative. External figures are sourced and cited on the page where they appear.

The market turned. The exit became law.

+11%

European sales rose 11% in 2025 — the first growth since 2022

2024 brought Europe's largest decline ever recorded: −21%, Germany almost −50%. Then in 2025 heat pumps outsold gas boilers in Europe for the first time.

EPBD Article 17(15) ended incentives for new stand-alone fossil boilers in 2025; plans must reach full phase-out by 2040.

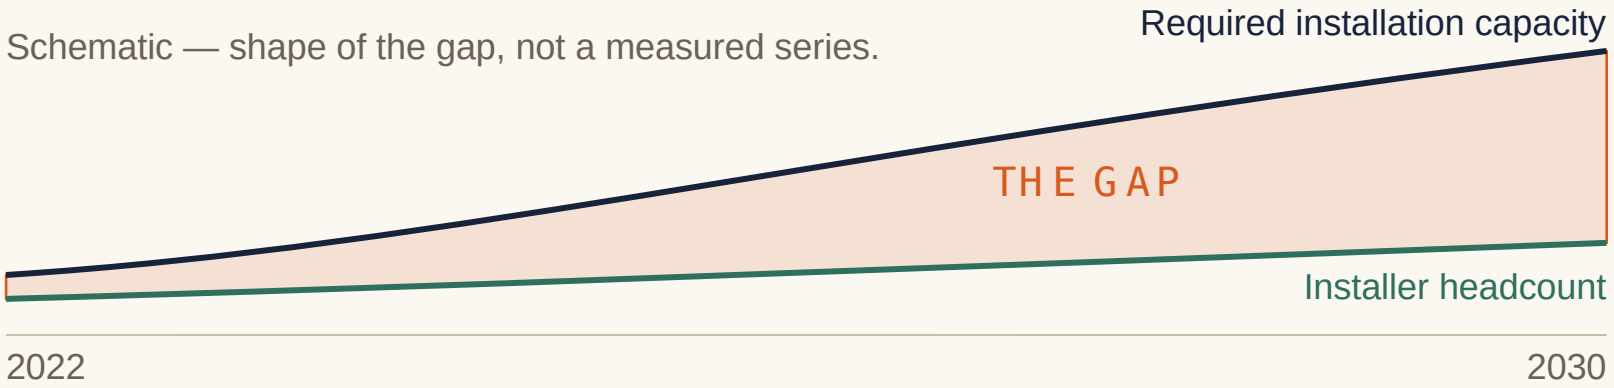

Sources: IEA Global Energy Review 2025 and 2026 · European Commission, Energy · retrieved 2026-09-10

The bottleneck is people.

750,000

more installers Europe needs — and at least half of today's installers must be reskilled for heat pumps.

Schematic — shape of the gap, not a measured series.

In a survey of 345 installers, 30% named staffing the top barrier — 41% at firms with 6+ staff.
Lack of demand ranked higher overall (41%); staffing binds firms that already have work.
UK: about 3,000 heat-pump engineers today against at least 27,000 needed by 2028.

Sources: European Commission · EHPA · Nesta · retrieved 2026-09-10

Raise throughput, not headcount.

Forecast capacity

by crew and accreditation, months ahead

Sequence the chain

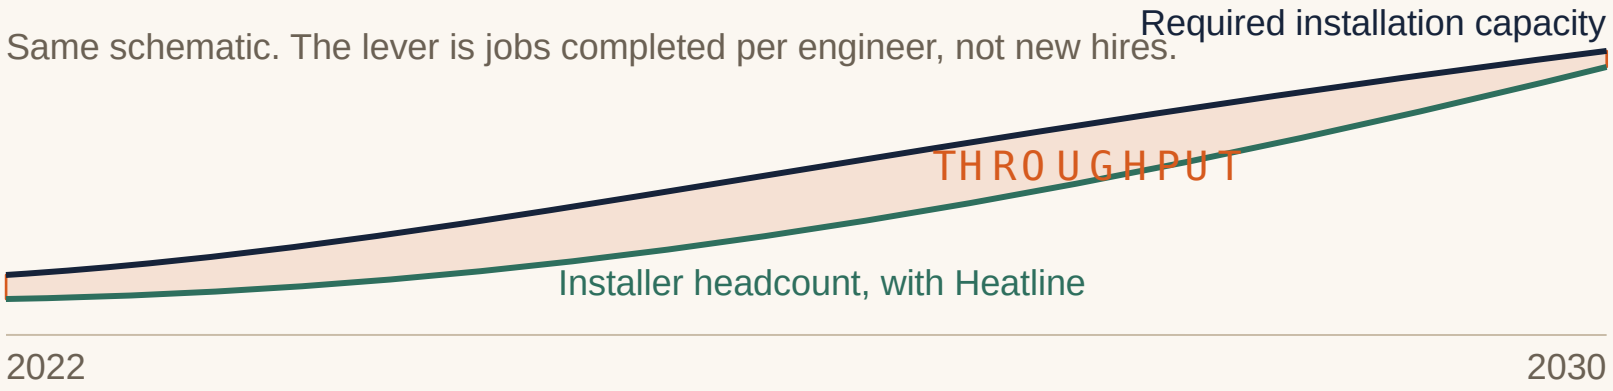

survey → install → commission, against part lead times

Hold the paperwork

grant and compliance kept on the same job record

Same schematic. The lever is jobs completed per engineer, not new hires.

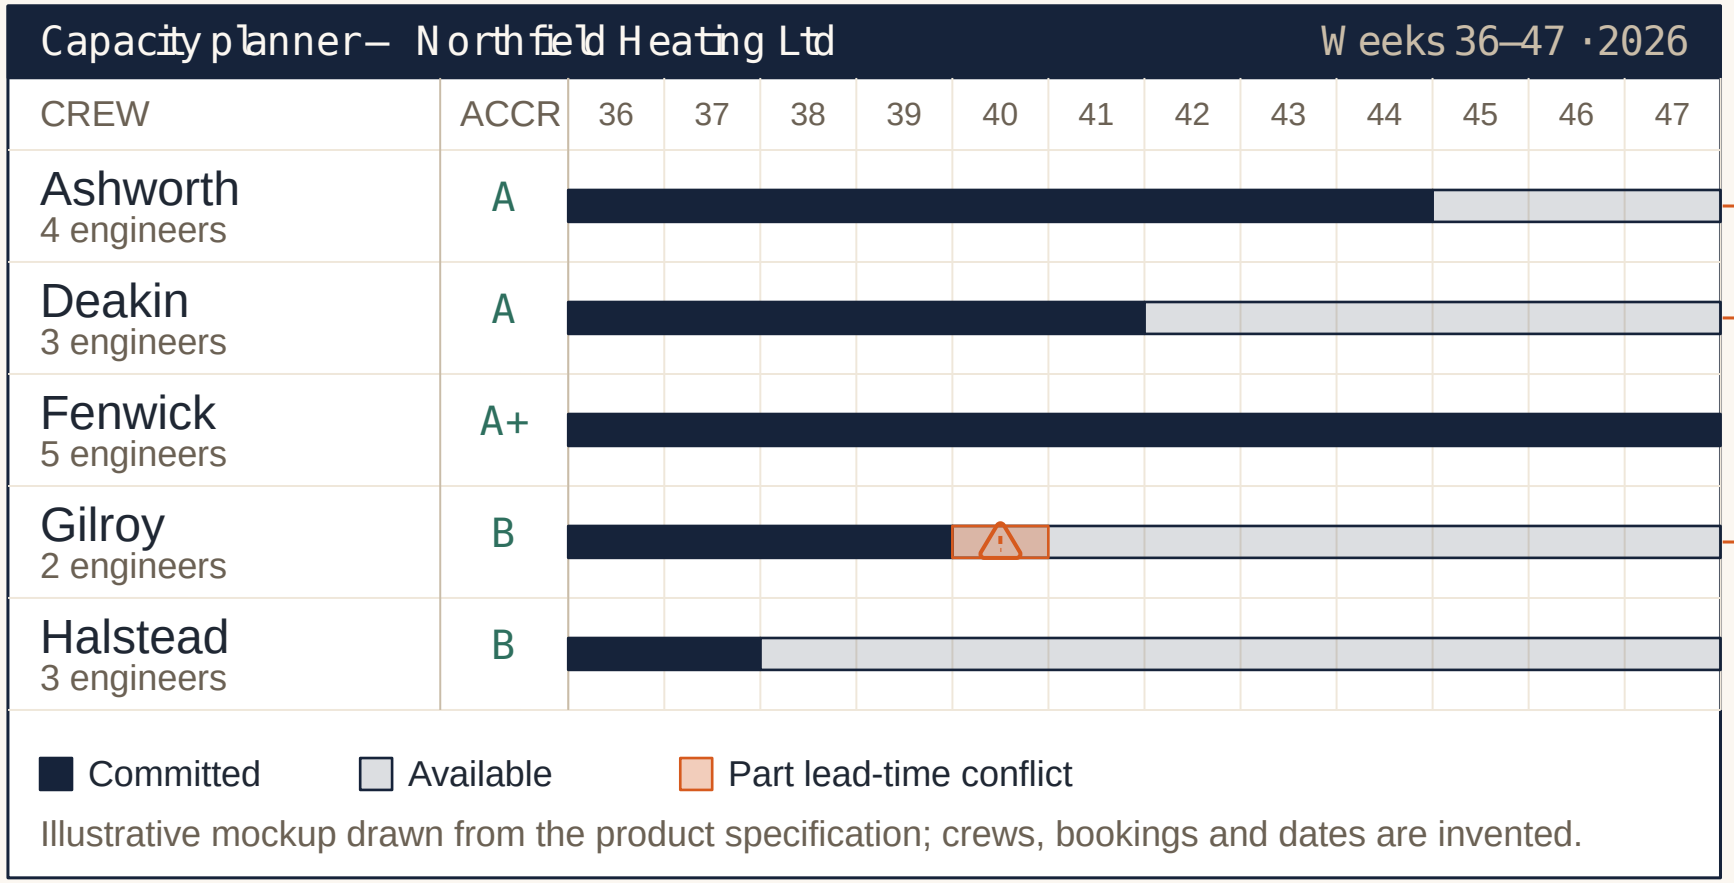

Heatline does not train engineers and does not sell equipment. It plans the capacity a business has.

Product capability described on this page is illustrative.

ILLUSTRATIVE

Twelve weeks of capacity, one screen.

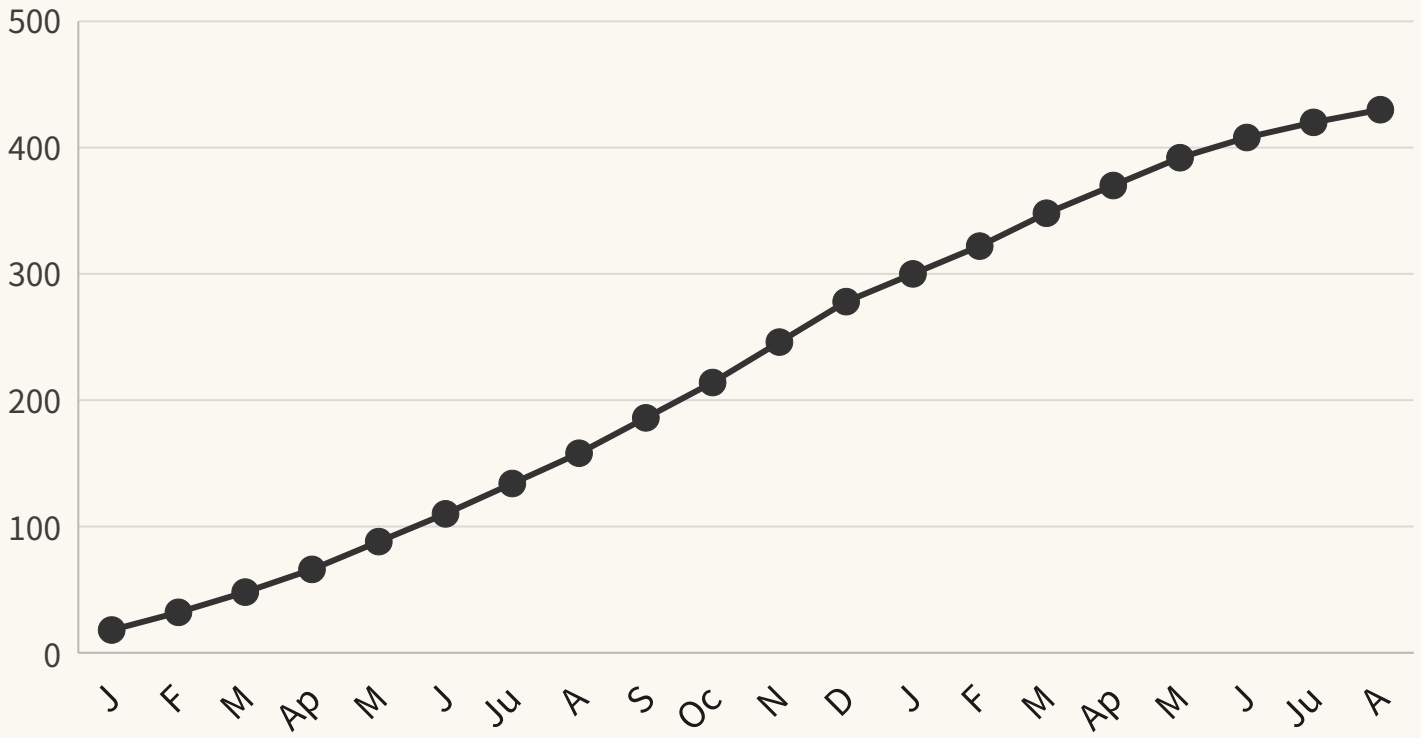

1. Committed and available capacity on one bar
2. Accreditation limits who can close a job
3. Lead-time conflicts show before booking

Product surface, crew names, bookings and accreditation states on this page are illustrative.

ILLUSTRATIVE

430 seats live across 41 businesses.

41
installer businesses

£0.93M
ARR at 31 August 2026

118%
net revenue retention, TTM

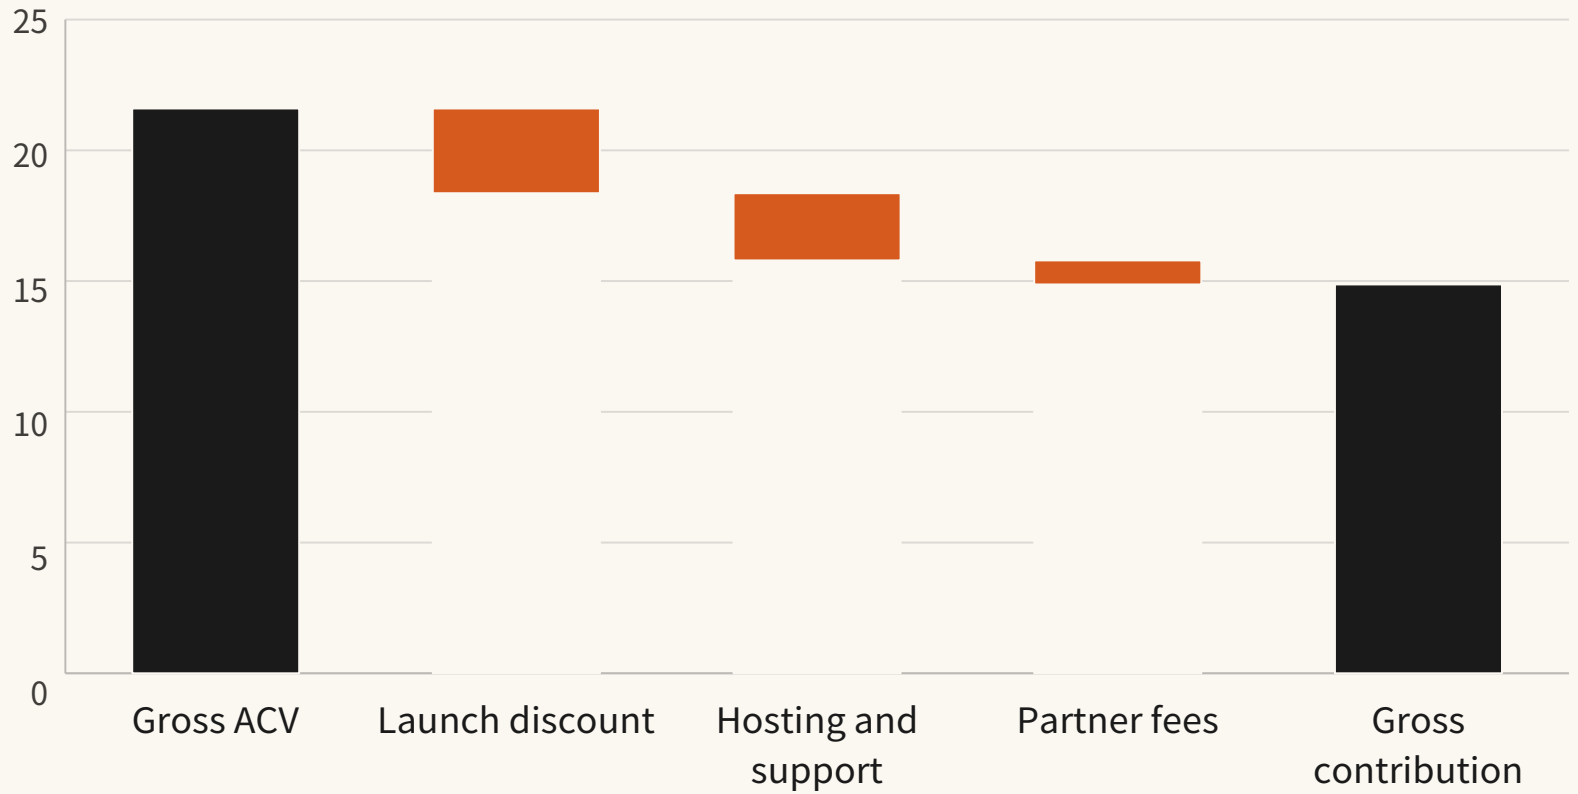

4%
logo churn, annualised

A live engineer seat is one engineer with an active licence on the last day of the month.
Seats count per engineer, not per business. All customers since launch; no cohort excluded, no month restated.

All Heatline traction, revenue, retention and churn figures on this page are illustrative.

ILLUSTRATIVE

£180 a seat pays back in 5.2 months.

£180 per engineer per month, annual term, minimum five seats

5.2

months to pay back

£6,400 blended CAC
£1,239 monthly gross contribution

Basis: one representative ten-seat customer, twelve months, GBP, unaudited.
Comparator: published small-trade field-service list pricing runs $49/month for one user to $499/month for five.

Heatline pricing, costs and CAC are illustrative. Comparator: Jobber published pricing · retrieved 2026-09-10.

ILLUSTRATIVE

5,500 reachable seats. £11.9M of ARR.

Stage	Seats	How it is derived	Basis
			Real
		Share of European installation volume	Illustrative
		The segment reporting staffing as its binding constraint	Illustrative
Target penetration by 2031		12% of the reachable base	Illustrative

£11.9M

5,500 seats × £180 × 12 = £11.9M ARR
at target penetration in 2031

Stage 1 derives from European Commission and EHPA figures; stages 2–4 and the revenue are illustrative.

ILLUSTRATIVE

Nobody else plans capacity months out.

Plans crew capacity months ahead	No	No	Yes
Models engineer accreditation and training	No	Partly	Yes
	Manual	Partly	Yes
	Manual	No	Yes
Published price per engineer per month	£0	$49–$499 per month per plan	£180
Where it genuinely wins			

We are not claiming these tools are bad. None of them answers the question an installer asks in January about August.

Heatline capability and price are illustrative; no vendor is named. Comparator: Jobber published pricing, 2026-09-10.

ILLUSTRATIVE

The manufacturer channel is repeatable.

Direct
2025

firms with 6+ crew

£2,900 CAC · 17 since

Trade bodies
2027 planned

accreditation bodies not yet tested
no CAC claimed

PROVEN · 41 CUSTOMERS

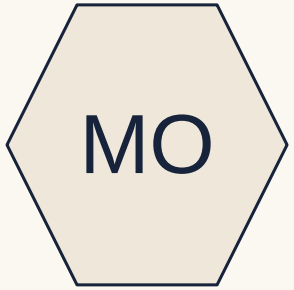

The September 2025 inflection on the traction curve came from this channel: 17 of the 41 customers, at £2,900 acquisition cost against £6,400 direct.

Channel counts, cycle times and acquisition costs are illustrative. Segment basis: Nesta installer survey, 2026-09-10.

ILLUSTRATIVE

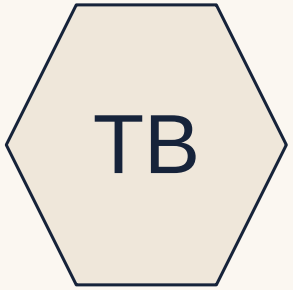

This rota ran by hand for nine years.

Maya Oduya

CEO

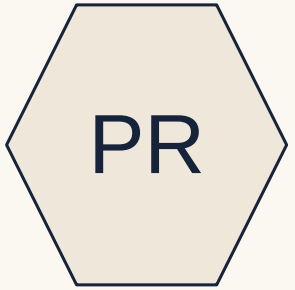

Nine years operating a 40-engineer heating contractor. Built and ran by hand the rota that became Heatline's first prototype. Owns the customer definition of capacity.

Tom Brenner

CTO

Eleven years building constraint-solver scheduling for logistics fleets. Owns the planner and the solver.

Priya Raman

HEAD OF CUSTOMER

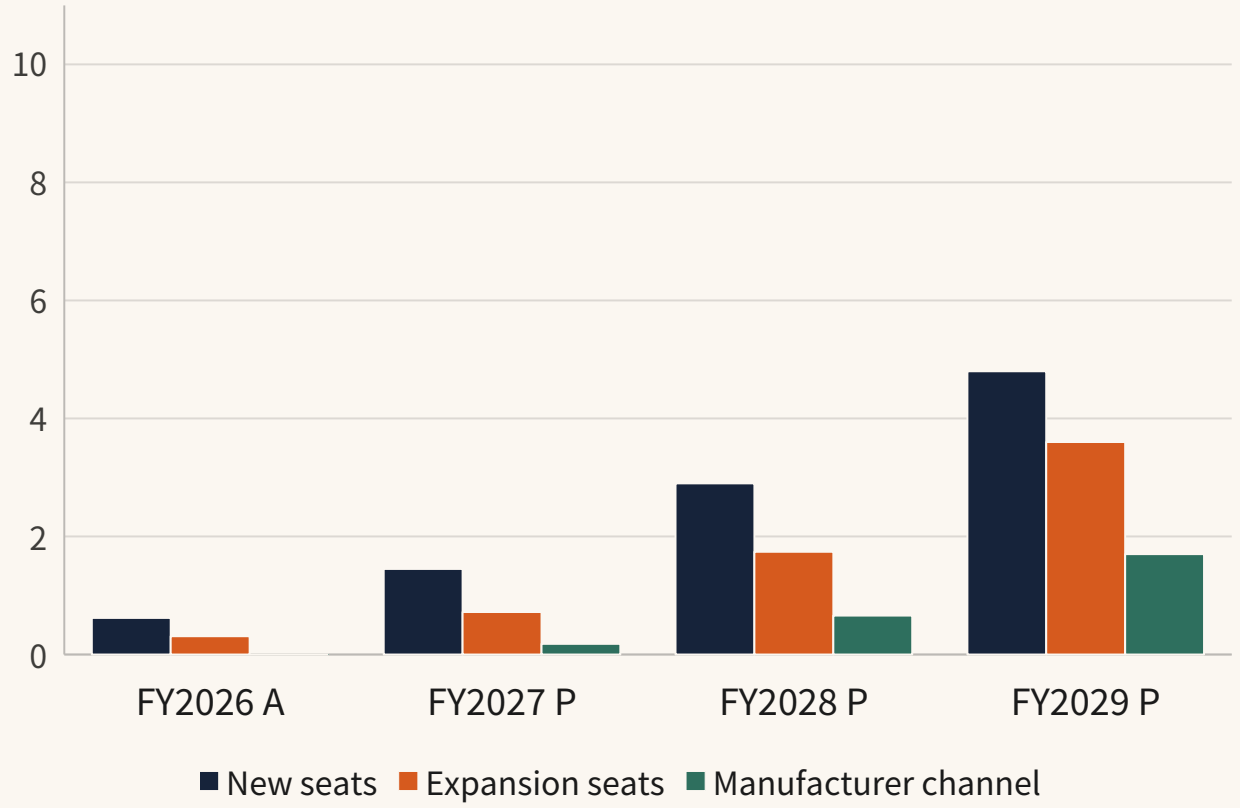

Trained more than 400 engineers on heat-pump commissioning at a national training provider. Owns accreditation modelling and onboarding.

Advisor: a former operations director of a national installer network, unnamed here pending permission.

Heatline's team is fictional; no real person is depicted or named. Portraits are native shapes, not photographs.

ILLUSTRATIVE

Expansion seats carry the plan.

Driver arithmetic

new seats × £180 × 12
expansion at 118% NRR
held flat
channel seats at £2,900 CAC

Exposure

The plan assumes retention holds at 118% and that the manufacturer channel scales past one partner. Neither is proven. If retention falls to 105%, FY2029 revenue falls by roughly a quarter.

All revenue, driver and retention figures are illustrative. FY2026 is labelled actual; FY2027–FY2029 are projected.

ILLUSTRATIVE

SEED ROUND · SEPTEMBER 2026

£4.2M

Split five ways on the next page.

24 months of runway to Q3 2028

Milestones: £5.3M ARR, two additional markets live, and the manufacturer API in production with three partners.

The round size, runway and milestones on this page are illustrative.

ILLUSTRATIVE

44p in every pound goes to the planner.

Area	Amount	What it buys	Milestone it reaches
Engineering and product		Capacity planner v2 and the manufacturer API	API in production with three partners
Go-to-market		Germany and the Netherlands live	40% of new seats from outside the UK
Customer success and training		Onboarding at a 10-day median	Net revenue retention held at 118%
Data and compliance		Grant and accreditation reporting automated	Reporting shipped for two schemes
Reserve		Three-month buffer	Not allocated
Total			**100% of the round**

All amounts, shares and milestones on this page are illustrative.

ILLUSTRATIVE

Definitions and every external source.

Metric	Definition	Period and system of record
Live engineer seat	One engineer with an active licence on the last day of the month	Monthly since 2025 · billing system
ARR	Live seats × list price × 12, net of discount	At month end · billing system
Net revenue retention	Trailing twelve months, existing customers only, excludes new logos	Monthly · billing system
Customer acquisition cost	Blended sales and marketing spend ÷ new customers, same quarter	Quarterly · finance ledger
Payback	Acquisition cost ÷ monthly gross contribution	Per cohort · finance ledger

To 31 July 2026 the UK Boiler Upgrade Scheme had received 151,136 applications, issued 101,029 vouchers, redeemed 93,364 and paid £661,303,000. The grant is £7,500 per heat pump, plus £1,500 off gas grid until March 2027.
The US section 25C credit is not allowed for property placed in service after 31 December 2025.

Heatline is fictional. Every company, product, customer, traction and financial figure in this deck is illustrative.
